Project Name: IceBreaker

Full App Name: IceBreaker: Catch Up w/ Friends!

Team Members: Elias Taylor (Full Stack), Fabio Tran (Full Stack),

Project Abstract:

- IceBreaker is a social networking mobile app that will encourage users to participate in a brief activity with their friends once a day through a randomized notification alert. The first goal of the app is to help people maintain relationships with friends and loved ones whom we may forget to reach out to during our busy lives. Furthermore, the app will facilitate the growth of potential new relationships as it aids in "breaking the ice" where it might have been traditionally difficult for certain individuals.
